

Hitzinger meanwhile deals for more than 35 years with conditions of operation of the alternators inside of ships. Wether Oil Tanker, Frigates, Corvettes or Submarines our alternators supply all types of ships.

These alternators, combined with dieselmotors of various suppliers, the gen-sets mostly supply ship mains power.

The alternators design can be chosen according to all common ship classification institutes. The cooling is provided either by self-ventilation or by an air-water heat exchanger (both salt- or sweetwater)
