

The design and the manufacturing of synchronous alternators meanwhile are more than 4 decades in the focus of the company. Intensive research and development and a number of patented constructions offer a technically fully developed, practically orientated product to our customers.

The long run experience and the use of most modern devices for calculation, design and manufacturing and the flexible construction concept enables alternator solutions fitting to each application.

Beyond this those opportunities, completed by extensive quality controls guarantee high quality standards.

Especially for the operation in micro hydro power plants the Hitzinger synchronous alternators are available in every requested design and equipment and have proved themselves worldwide under most different, unfavourable climatic and mechanical conditions.
