

**Major goal of our efforts is to meet our customers needs with a high level of quality and concentrating on total cost of ownership, best possible with a tight time to market.**

**This is especially in the area of airport GSE, a tough challenge, but we are confident to meet them because we have had many successes in the past. FOR FAMOUS AIRLINES AND AIRPORTS THE BEST IS JUST GOOD ENOUGH.**

#### **When the cost shall decrease ...**

but the requirements to the environmental protection and safety rise, then every airport, every airline and every airplane manufacturer shall contact Hitzingler, because only with Hitzingler machines these goals can be achieved.

The usage of 400Hz ground power supply of Hitzingler systems is much cheaper as the usage of the auxilliary turbine of an aeroplane. With Hitzingler the costs can be kept at a low level. Because of not using the auxilliary turbine, the operation cost, the risk of accidents, the noise level and the pollution by exhaustion is lowered. Last but not least Hitzingler equipment is easy to use and always operation-safe.

## **Systems in Different Versions.**

**Hitzingler-airport equipment is offered for various types of applications:**

- Centralized systems
- De-centralized systems
- Mobile Systems
- Military systems
